

The research team — four sub-agents (Lab 1)

Multi AI Agents Workflow for Content Creation · Day 1 · Claude Cowork

Agent	Job	Reads	Writes
market-researcher	Who in Singapore looks for financial planning, on which channels, why now; demand signals and trends. Web research.	business-brief.md	research/market-research.md
business-analyst	The funnel from firm-metrics.csv: visits → enquiries → chats → plans; conversion rates; what 40 chats/month needs; budget per chat. Calculates, does not guess.	firm-metrics.csv, services.csv	research/business-analysis.md
competitive-analyst	Six named Singapore competitors across four types (planning firms, robo-advisers, bank advisers, influencers): offer, pricing model, channels, content themes, gaps. Web research.	business-brief.md	research/competitive-analysis.md
strategy-advisor	Reads the three reports and writes the recommendation. Waits for the other three.	research/*.md	research/recommendation.md

Rules for every agent

- Cite every figure with its source and date. If it cannot be sourced, write UNKNOWN — never a plausible guess.
- The INTERNAL columns in services.csv are for analysis only. They never appear in anything public.
- Write in plain English, under 600 words per report.

recommendation.md must contain

1. A one-line positioning statement.
2. The 2 personas to target first, and why.
3. The 3 channels to start with, and why.
4. Four content themes.
5. Five things the website must do to convert a visitor.
6. The top 3 risks, including regulatory ones.
