

Lab 02 — Plan and Build the Horizon Website with Codex

Multi AI Agents Workflow for Content Creation · Day 1 · Codex

Course: Multi AI Agents Workflow for Content Creation (TGS-2023036153)

Day 1 · Topic 1 · about 45 minutes · slides 35–38

Surface: Codex

Features: Add a folder · /plan · AGENTS.md (/init) · build from data, not memory

The story so far

The research is back: mid-career families and pre-retirees, on LinkedIn, Facebook and email. Every post will point to the website — and the current one is out of date. Rachel wants a new site this week, built from the brief so nothing is invented.

Your goal

Every post, email and video will point somewhere. Build the website first — planned before a single file changes, and driven by the brief, so nothing is invented.

You'll build

docs/index.html: hero, services, retirement calculator, checklist, reviews, FAQ, contact form with PDPA consent

What is in this folder

- assets/site-brief.md
- assets/brand.md
- assets/faq.md
- assets/testimonials.csv
- assets/checklist-items.md
- assets/recommendation-sample.md
- solution/ — reference files from the verified build
- prompts.md / prompts.pdf — every prompt, ready to paste
- evidence/checklist.md — what to capture as proof

Step by step

1. **Add the brief** — Copy the assets into horizon-studio/data/. No Lab 1 recommendation? Copy recommendation-sample.md to research/recommendation.md.

2. **Open it in Codex** — In the ChatGPT desktop app open Codex, create a local project and add the horizon-studio folder. Run git init if it is not a repo yet.
3. **Plan first** — Type /plan, then paste the prompt. Read every question Codex asks.
4. **Answer and narrow** — Answer the questions. Cut one step you did not ask for, then approve.
5. **Serve it** — Run `python3 -m http.server 8080 --directory docs` and open `http://localhost:8080`.
6. **Test it** — Calculator: 30, 62, S\$20,000, S\$800, 4% must show S\$693,138. Try it at 375px wide.
7. **Write the rules** — Run /init. Trim AGENTS.md to What this is, Commands, Conventions, Boundaries — under 60 lines.

The prompts

PROMPT — Codex, after /plan

Build the Horizon Wealth Planning website in docs/index.html (GitHub Pages will serve docs/).
Read data/site-brief.md, data/brand.md, data/services.csv, data/faq.md, data/testimonials.csv, data/checklist-items.md and research/recommendation.md first.

MUST HAVE

- Every section in site-brief.md, in that order.
- Six service cards — never the INTERNAL columns.
- A retirement calculator with monthly compounding and the illustration note word for word.
- The checklist unlocked by email; contact form with a REQUIRED PDPA consent box; no backend.
- The footer disclaimer word for word.

CONSTRAINTS

- One HTML file, inline CSS and JS, no framework.
- Accessible: labels, alt text, focus, contrast.

DONE WHEN

- The calculator test gives S\$693,138.
- No horizontal scroll at 375px.

Check your work

- ☐ Plan mode showed steps AND questions before any edit.
- ☐ You answered its questions instead of letting it guess.
- ☐ The calculator test shows S\$693,138 with its illustration note.
- ☐ Six service cards; no INTERNAL fee or hours anywhere.
- ☐ The contact form will not submit without consent.
- ☐ No horizontal scroll at 375px; AGENTS.md is under 60 lines.

If it goes wrong

- **The calculator is off** — Ask Codex to use monthly compounding: $r = \text{rate}/12$, $n = \text{years} \times 12$.
- **The page is blank** — Serve it over `http://` — opening the file directly can block scripts.

Stretch

- Add Open Graph tags so a shared link shows a card with the tagline and Sunny.

Why it matters: Build from the brief, not from memory. The model knows what a financial website looks like; only the brief knows what Horizon is allowed to say.

Next

Lab 3 — A Compliance Subagent, Then Publish. Keep what you built — the next lab starts from it.

Safety

Use only this lab's synthetic data and your own accounts. Never paste a real API key, password, token or client data into a prompt or a file — tokens live only in `.env`. Every email address in the data must resolve to your own inbox. Nothing is published or sent without a person approving that exact version.
