

Team roles — subagent definitions (Lab 9)

Multi AI Agents Workflow for Content Creation · Day 2 · Claude Code (subagents + agent teams)

Create one file per role in `.claude/agents/<name>.md`. The same definitions

work as ordinary subagents AND as agent-team teammates ("spawn a teammate

using the compliance-reviewer agent type").

name	description (when to use it)	tools	model
researcher	Gathering and checking the facts a Horizon post, email or video needs. Never writes the content.	Read, Grep, Glob, SendMessage	sonnet
social-writer	Writing Horizon LinkedIn and Facebook posts from the researcher's fact sheet, in sunny-voice and channel-formats.	Read, Write, Edit, Bash, SendMessage	sonnet
compliance-reviewer	Before any Horizon content reaches a person: checks facts and compliance, messages the writer, passes only when no Critical or High issue remains. Never edits.	Read, Grep, Glob, SendMessage	opus

The compliance-reviewer preloads two skills in its frontmatter:

```
skills:  
- fact-check  
- fin-compliance
```

Body of each file: the role in plain words — what it reads, what it hands

back, and what it must never do (approve, publish --live, invent a number).

Note: a teammate loads skills from the project, not from this list; the

list matters when the role runs as a subagent.
