

A Telegram bot for Hermes (Lab 13)

Multi AI Agents Workflow for Content Creation · Day 2 · Hermes Agent (gateway bot, cron)

1. In Telegram, open @BotFather -> /newbot -> a name and a username ending in "bot". Copy the token.
2. Find your Telegram user id (e.g. message @userinfobot).
3. `hermes gateway setup` -> Telegram -> paste the token; allow only your user id.
4. `hermes gateway start` (or `hermes gateway install` to run it as a service). The gateway also runs scheduled jobs and the Kanban dispatcher.
5. Message your bot "hello" — Hermes answers.
