Labs — Multi AI Agents Workflow for Content Creation (ChatGPT Edition)

TGS-2023036153 · 15 labs · build an AI marketing team, then run five campaigns with it.

The scenario

Rachel Goh founded Horizon Wealth Planning in 2010. Fifteen years and 1,200 clients later, almost every new client still comes through a referral — and referrals are slowing. Younger Singaporeans look for money help on LinkedIn, Facebook, YouTube and in their inbox, and Horizon is invisible there.

Rachel has a website, three planners, a part-time marketer (Jun Wei) and S$4,000 a month. She wants 40 booked free chats a month by March 2027 — without hiring a marketing team. So you will build her one, made of AI agents, with ChatGPT and Codex:

- Marketing Team Lead — plans, assigns, checks, hands to a person
- Growth Strategist — research, positioning, briefs, storyboards
- Content Creator — posts, newsletter, scripts, page copy
- Creative Designer — images, thumbnails, the video
- Website Designer — landing pages, published and QA-checked
- Growth Analyst — personas, cadence, results, weekly report

First you form the team: instructions, skills and connectors for each agent. Then the team runs five campaigns together. Financial content is regulated, so a person approves every piece before it goes out. The data is fictitious but consistent, and every email address resolves to your own inbox.

Before you start

- The ChatGPT desktop app on Plus or Pro (ChatGPT Work, Codex, plugins, Sites).
- Node.js 22, Python 3 with Pillow, and ffmpeg.
- A personal Google account for Drive and Gmail; optional LinkedIn, Facebook Page and YouTube accounts for live publishing.
- One working folder, `horizon-studio/`, from Lab 1 to Lab 15 — ready-made in this pack with every lab's data in `data/`. Choose it in Codex (a local project); do not create one.
- `.md` files are plain text for Codex to read; each has a `.pdf` twin with the same name for you to read.

Safety

Use only this lab's synthetic data and your own accounts. Never paste a real API key, password, token or client data into a prompt or a file — tokens live only in .env. Every email address in the data must resolve to your own inbox. Nothing is published or sent without a person approving that exact version.
