Lab 14 — Measure, Govern and Write the Team Playbook

Multi AI Agents Workflow for Content Creation (ChatGPT Edition) · Day 2 · Use Codex

> **USE: CODEX** — Codex, in your horizon-studio folder

Course: Multi AI Agents Workflow for Content Creation (ChatGPT Edition) (TGS-2023036153)

Day 2 · Topic 4 · about 40 minutes · slides 147–152

Surface: Codex (subagents)

Features: compare agent patterns · the roster: instructions, skills, connectors · approval matrix · responsible-AI controls

> **Copy the prompts:** https://tertiarycourses.github.io/TGS-2023036153-Multi-AI-Agents-Workflow-for-Content-Creation/prompts/chatgpt/#lab-14 — click **Copy** next to each prompt, then paste it into the chat.

The story so far

Eight weeks in. Rachel asks which ways of running agents earned their tokens, and how the team runs safely after you leave.

Your goal

Rachel asks: which patterns earned their tokens, and how does the team run safely after you leave? Answer with numbers, then with a playbook a new hire can follow.

You'll build

the agent-pattern comparison and the team playbook — with a Word copy of each

What is in this folder

> **.md or .pdf?** A `.md` file (Markdown) is plain text that Codex reads. Every `.md` here has a `.pdf` twin with the same name — open the PDF to read it yourself.

- `assets/run-log.csv`
- `assets/playbook-outline.md`
- `assets/responsible-ai-checklist.md`
- `prompts.md` / `prompts.pdf` — every prompt, ready to paste
- `evidence/checklist.md` / `checklist.pdf` — what to capture as proof

Step by step

1. **New session** — In Codex start a new thread in horizon-studio and name it "Lab 14". Run all of this lab's prompts in it.
2. **Check the data** — The assets are already in data/. Open one and skim it.
3. **Compare the patterns** — Copy and paste Prompt A.
4. **Write the playbook** — After the Lead shows the comparison, copy and paste Prompt B.
5. **Review it as Rachel** — Add one rule of your own and say why.

The prompts

PROMPT A — Codex: compare

> Use the growth-analyst subagent. From
> data/run-log.csv compare the patterns we used —
> one agent, subagents, parallel subagents with a Lead review and the scheduled task
> — on minutes, tokens, defects caught before a person
> and human edits. Which pattern pays off for which
> job? Save reports/agent-comparison.md.
> Write for a business owner, in plain English: no
> codes, IDs, file names or line numbers; start with
> what it means and what I do next. Save a Word copy
> (.docx) of each result.

PROMPT B — Codex: the playbook

> Write strategy/team-playbook.md with
> data/playbook-outline.md. Include the roster: for
> each agent its instructions file in agents/, its
> skills, connectors, model and what it may never do;
> the approval matrix by risk; the rules in
> data/responsible-ai-checklist.md; and what to do when
> a wrong post goes out. Then run fin-compliance on
> it.
> Write for a business owner, in plain English: no
> codes, IDs, file names or line numbers; start with
> what it means and what I do next. Save a Word copy
> (.docx) of each result.

Ask about the result

Once a result opens, type any of these in the chat to get its meaning. Ask until it makes sense to you — then decide.

- "In one line each: when should we use one agent, subagents and a Lead review?"
- "Who must approve a post that has a CPF figure in it?"
- "A wrong post went out. What are the first three things we do?"

Check your work

- ☐ The comparison shows the one-agent baseline caught 0 defects.
- ☐ It says which pattern suits which job, with numbers.
- ☐ The roster lists all six agents with skills and connectors.
- ☐ The approval matrix says who approves CPF and tax figures.
- ☐ It has an incident procedure, and your own rule.

If it goes wrong

- **The playbook is generic** — Say: "use our actual agents, files and numbers".

Stretch

- Turn the playbook into a skill, team-playbook, for the Lead.

> **Why it matters:** Teams cost more tokens. The run log shows what you buy with them: defects caught before a person, and fewer edits.

Next

Lab 15 — Subagents at Work: A Strategy Debate and a QA Loop. Keep what you built — the next lab starts from it.

Safety

Use only this lab's synthetic data and your own accounts. Never paste a real API key, password, token or client data into a prompt or a file — tokens live only in .env. Every email address in the data must resolve to your own inbox. Nothing is published or sent without a person approving that exact version.
