

Evidence — Lab 08: The Human Approval Gate and the Publishers

Multi AI Agents Workflow for Content Creation · Day 2 · Codex

Capture a screenshot or file for each line. Evidence beats a description.

- ☐ Codex could not approve: approve.mjs refused without a terminal.
- ☐ You approved test-001 in your own terminal; the row shows your name, time and hash.
- ☐ The dry run printed the request with the token masked.
- ☐ After you edited the post, --live refused: hash changed.
- ☐ .claude/settings.json has the PreToolUse hook on Bash, Edit and Write.
- ☐ .env is git-ignored and holds no token you pasted into a chat.

Notes

What did not work first time, and what you changed:

What you did NOT verify:
