

Lab 01 — Set Up the Studio and Explore Horizon's Website

Multi AI Agents Workflow for Content Creation (ChatGPT Edition) · Day 1 · ChatGPT Project → Codex

Course: Multi AI Agents Workflow for Content Creation (ChatGPT Edition) (TGS-2023036153)

Day 1 · Topic 1 · about 30 minutes · slides 29–35

Surface: ChatGPT Project → Codex

Features: a ChatGPT Project with shared files · AGENTS.md · Horizon's public website

The story so far

October 2026. Rachel has a website and a goal: 40 booked chats a month by March. She has no marketing team. Before you hire one made of agents, give it a home — shared rules, shared facts — and put the website online.

Your goal

Before anyone builds a team, the team needs a home: one folder of shared facts and rules, and Horizon's website — already live at one public link every post points to.

You'll build

the Horizon Marketing project, horizon-studio/ with AGENTS.md, and the public site link in the charter

Horizon's website

- **Website:** <https://tertiarycourses.github.io/TGS-2023036153-Multi-AI-Agents-Workflow-for-Content-Creation/>

Folder structure

```
labs_chatgpt/
├── horizon-studio/  ← choose this folder
│   ├── content/    posts, newsletter, scripts (agents fill it)
│   ├── data/       every lab's briefs and data, ready to read
│   ├── README.md
│   ├── reports/    campaign results, the weekly report
│   ├── research/   market and competitor research
│   ├── review/     approvals
│   ├── strategy/   briefs, personas, calendar
│   └── web/
│       ├── site/
│       │   └── index.html  the local copy of Horizon's site
```

What is in this folder

- assets/horizon-site.html
- assets/team-charter.md
- assets/business-brief.md
- assets/brand.md
- assets/facts-2026.md
- assets/compliance-checklist.md
- solution/ — reference files from the verified build
- prompts.md / prompts.pdf — every prompt, ready to paste
- evidence/checklist.md — what to capture as proof

Step by step

1. **Choose the folder** — In Codex create a local project and choose labs_chatgpt/horizon-studio. It is ready-made — do not create one.
2. **Make the Project** — In ChatGPT create the Project "Horizon Marketing" with the charter, brand, facts and compliance files; Prompt A is its instructions.
3. **Design your team** — Paste Prompt B in Codex and answer as Horizon's owner. Pick your team — keep the six charter roles; the next labs build them.
4. **Write the charter** — Paste Prompt C to write AGENTS.md.
5. **Open the website** — Open the Website link above — Horizon's public site, shared by everyone; you do not build it.
6. **Know the site** — Paste Prompt D. Then open the link on your phone and check the calculator shows S\$693,138.

The prompts

PROMPT A — ChatGPT Project: instructions

You support Horizon Wealth Planning's AI marketing team. Use the project files: team-charter.md for who does what, brand.md for the voice and look, facts-2026.md for every number, and compliance-checklist.md before anything is shown to a person. Never publish or send anything.

PROMPT B — Codex: design your team

Act as a marketing consultant. Interview me, the owner of Horizon Wealth Planning, to design my AI marketing team. Ask one question at a time and wait for my answer: my goal, what success looks like by March 2027, who we want to reach, which channels we use, how much we publish each week, and who approves before anything goes out.

Then list 8 to 10 team members I could have, numbered, each with a one-line job. Include the six roles in data/team-charter.md and mark the ones you

recommend. Wait for me to choose.
Save my answers and my chosen team, with each member's job, to data/team-design.md.

PROMPT C — Codex: the charter

Read data/team-charter.md, data/team-design.md and data/business-brief.md. Write AGENTS.md for this studio in four sections — What this is, The team, Rules, Files — under 60 lines. The team is the one I chose in data/team-design.md. Rules: every number comes from data/facts-2026.md; every piece passes fact-check and fin-compliance; nothing is published or sent without a person's approval.

PROMPT D — Codex: know the site

Read web/site/index.html, the local copy of Horizon's public website. In five bullets: who it is for, the offer, the main call to action, what the calculator does, and the disclaimer. Then add this line to the Files section of AGENTS.md:
Public site (link in every post): <https://tertiarycourses.github.io/TGS-2023036153-Multi-AI-Agents-Workflow-for-Content-Creation/>

Check your work

- ☐ The Horizon Marketing project holds the four files and the instructions.
- ☐ data/team-design.md holds your answers and the team you chose, with the six charter roles in it.
- ☐ AGENTS.md has the four sections and is under 60 lines.
- ☐ Its rules name the facts sheet, the two checks and the human approval.
- ☐ AGENTS.md names the public site link every post points to.
- ☐ The public site opens on a phone; the calculator shows S\$693,138.

If it goes wrong

- **The website link will not open** — Use the GitHub Pages backup:
<https://tertiarycourses.github.io/TGS-2023036153-Multi-AI-Agents-Workflow-for-Content-Creation/> — or open web/site/index.html in any browser.

Stretch

- Ask for a one-paragraph summary of the site from the point of view of a busy 35-year-old parent.

Why it matters: Shared context first, agents second. Every agent you add later starts from these files, so a wrong rule here is wrong everywhere.

Next

Lab 2 — Form the Team: Instructions for Each Agent. Keep what you built — the next lab starts from it.

Safety

Use only this lab's synthetic data and your own accounts. Never paste a real API key, password, token or client data into a prompt or a file — tokens live only in `.env`. Every email address in the data must resolve to your own inbox. Nothing is published or sent without a person approving that exact version.
