

Connect your accounts (Labs 8-11) — optional, about 20 minutes

Multi AI Agents Workflow for Content Creation (Claude Edition) · Day 2 · Claude Code (agent team) → LinkedIn, Facebook

Every lab works in **dry-run** mode without this. Connect only accounts you own, and only test pages and channels. Tokens go in .env — never in a prompt.

LinkedIn (your own profile)

1. linkedin.com/developers -> Create app (needs a LinkedIn Page; a test page is fine).
2. Products -> add **Share on LinkedIn** and ****Sign In with LinkedIn using OpenID Connect****.
3. Auth -> OAuth 2.0 tools -> create a token with scopes openid, profile, w_member_social. Paste it into LINKEDIN_ACCESS_TOKEN.
4. Your author URN: call https://api.linkedin.com/v2/userinfo with the token; sub is your id -> LINKEDIN_AUTHOR_URN=urn:li:person:<sub>.
5. LINKEDIN_VERSION is a month, YYYYMM — use a recent one from LinkedIn's docs.

Facebook Page

6. Create a test Facebook Page you manage.
7. developers.facebook.com -> Create app -> Business.
8. Graph API Explorer -> pick the app -> permissions pages_manage_posts, pages_read_engagement -> Generate token -> choose your Page.
9. Use "Get Page Access Token"; put it in FB_PAGE_TOKEN and the Page id in FB_PAGE_ID. Check the current Graph API version in Meta's changelog.

YouTube

10. console.cloud.google.com -> new project -> enable YouTube Data API v3.
11. OAuth consent screen: External, add yourself as a test user.
12. Credentials -> OAuth client ID -> Desktop app. Copy id and secret.
13. Ask Claude Code for scripts/google-auth.mjs (a one-off local sign-in that

prints a refresh token for the youtube.upload scope). Put it in

YOUTUBE_REFRESH_TOKEN.

14. Uploads stay **private** until you make them public in YouTube Studio.
